TESTING FOR EXPOSED AG WORKERS

Benton-Franklin Health District is requesting assistance from health care providers in ensuring enhanced testing for agricultural workers. This group of workers are at increased risk for infection due to their work environments and multiple work locations.

Agricultural workers include farmworkers and employees who work in food processing. Many of these workers move between farms and facilities.

Testing is recommended for agricultural workers if they are symptomatic or asymptomatic with exposure to COVID-19 or have been advised by BFHD to be tested.

If testing supplies for agricultural workers your only barrier, please contact us at (509) 539-0416.
